SUMMARY

Backend-focused Software Engineer at JPMorgan Chase building Java microservices and React applications for fraud prevention across $1B+ in daily payments. Experienced in leading features from design to production, modernizing legacy systems, and mentoring engineers.

TECHNICAL SKILLS & CERTIFICATIONS

- **Languages:** Java, JavaScript, SQL, Python, C#
- **Frameworks:** Spring Boot, Spring Data JPA / Hibernate, React, .NET Core, REST APIs
- **Messaging & Cloud:** Kafka, AWS
- **Databases:** Oracle, PostgreSQL, MySQL, SQL Server
- **CI/CD & Tools:** Jenkins, Git, GitHub, Jira, Confluence
- **Testing & Process:** JUnit, qTest, Agile/Scrum
- **Certification:** AWS Certified Developer – Associate

PROFESSIONAL EXPERIENCE

JPMorgan Chase & Co. (September 2022 – Present)

Software Engineer II (February 2024 – Present)

- Migrated a Wire Payments backend service processing $100M/day from a monolithic architecture to Java microservices
- Built the alert view and processing logic for the Fraud Prevention Desktop migration, cutting processing time on $1B in daily payments and saving 50+ FTE
- Delivered a suspicious-caller detection feature end to end, from analysis through deployment, saving $16M per year
- Developed a feature protecting elderly customers from wire fraud, saving $3.3M per month
- Kept the test environment stable during and after a database migration

Software Engineer I (September 2022 – February 2024)

- Designed a new database schema for the future state of the Fraud Prevention application, based on analysis of the existing data model
- Served as acting tech lead after the tech lead was reassigned, leading 2 developers and a product analyst to deliver a feature to production
- Led the team responsible for auditing the administration application
- Mentored 2 engineers and helped onboard 10 new team members, writing the team's onboarding documentation
- Surfaced EWS bank details directly in the frontend application, so specialists no longer had to switch to a separate application
- Added color coding to the frontend application to speed up specialists' transaction processing
- Helped resolve production issues affecting $100M wire transactions

Infoverity, Inc (June 2021 – July 2022)

MDM Consultant

- Programmed data quality rules in JavaScript (Stibo STEP) and Informatica Developer, ensuring client data met MDM quality standards
- Led a 3-person team configuring Stibo STEP workflow UIs for a more user-friendly experience
- Analyzed thousands of records across multiple data sources in one week using a custom analytics tool to define data quality rules
- Presented data quality findings to clients, walking them through their data and how to improve it

Honeycomb Technologies (July 2021 – September 2022)

Programmer (Freelance)

- Designed and built a client–trainer chat feature for the Shape Me Up fitness app, developing the frontend in Ionic Framework and the backend in Firebase
- Developed the SQL database foundation for an inventory management program

EDUCATION

The Ohio State University, Columbus, OH (Class of 2021)

B.S. Computer Science and Engineering

B.S. Physics
